PROJECT

B.A.E - Breast Cancer Awareness and Examine | *HTML, CSS, JavaScript, Python*   **March 2022**
- B.A.E is a Breast Cancer Awareness website, whose main goal is to make early detection of breast cancer possible for every women, and provide them with a platform to be able to talk about it, and not loose hope in the darkest of times.
- Our website offers features such as a questionnaire for women to fill out about their daily habits and health to determine the risk for cancer, a cancer prediction model for women, an online support forum to ask questions about breast cancer, self examination of breast cancer symptoms, music and chatbot for listening to calming music and reading faqs.

United Listing | *HTML, CSS, JavaScript, PHP, BootStrap, MySQL*   **July 2021**
- Web application with responsive UI built for local small business owners to list their businesses in order to reach more people. Often small businesses do not have their own websites and customers miss out on the local sellers. It helps in strengthening the local economy.
- With the help of United Listing, sellers can register their businesses and list it under various categories. Registration process is quick and takes only a few minutes to complete. Customers on the other hand can browse through a list of businesses according to their needs by filtering out the categories. They can directly contact the sellers from our website if needed.

EXTRACURRICULAR

Mockupp Hackathon   **May 2022**
Participated in a 10 hour design hackathon and won first prize by re-designing codeforces website.

SheHacks Hackathon   **March 2022**
